Recruitment Officer
Athenahealth
Watertown, Massachusetts

Dear Recruitment Officer,

I am writing to you regarding the Software Developer Internship position in hopes that I can spend this summer developing tools that not only help those working in medical field but patients as well. I learned about Athenahealth and the internship position through Rensselaer Joblink service. I've attached my resume, which contains more detail of my past projects and experience.

I've personally dealt with problems, through family members, that stem from the complexity of managing medical records. Having to take multiple of the same diagnostic test because of the difficulty in communication between doctors offices and transfers of medical records should not be problem in our modern society. I look forward to an opportunity to work on tools and software that will not only save medical practitioner time but the patients money. I am especially motivated by desire to create tools that will hopefully aid others in problems I have experienced before. I do not have experience in the development of medical software, however I am a very flexible developer and researcher. I've worked on variety of software projects relating to acoustics simulations, iPhone applications, user interfaces, and web development.

I would love to talk about this position and my qualifications more with you. You can reach me at (203) 464-6533 or (better yet) through email at espinm2@rpi.edu. Thank you for taking time to consider my credentials for this summer internships position.

Sincerely yours,

Max Espinoza
